Mouthwashes that are directed against the bacterial peroxidase system contain four enzymes lysozyme, lactoferrin, glucose oxidase and lactoperoxidase. The released TNF- α initiates the activation of MAPK that sustains NF- κ B activity. Along with their useful effects, most medicines can cause unwanted side-effects although not everyone experiences them.

Role of Platelet Rich Fibrin and Platelet Rich Plasma in Wound Healing of Extracted Third Molar Sockets: A Comparative Study

Statistical Analysis Multilevel modeling procedures were used to statistically evaluate the changes over time and to compare group differences in ulcer size and pain. Background Today, cancer is one of the major problems in the healthcare system, especially in developing countries such as Iran. Rational prescribing: the principles of drug selection.

Role of Platelet Rich Fibrin and Platelet Rich Plasma in Wound Healing of Extracted Third Molar Sockets: A Comparative Study

A consensus panel has recommended that an antiseptic mouthwash should be used as a daily adjunct to mechanical cleaning for prevention of oral disease. Surgery for crown lengthening is regarded as one of the most common periodontal surgeries and the analgesic effects of benzodamine mouthwash and ibuprofen have been proven in various studies. This research is a pioneer study of a mucositis treatment substitution method in the bone marrow transplant ward in Iran.

Antifungal Effect of Mouth Rinses on Oral Candida Counts and Salivary Flow in Treatment

Surg J 2008; 3: 96-103. Shalet SM, Didi M, Ogilvy-Stuart AL, Schulga J, Donaldson MD.
