 Phone: 743-5311
 E-mail: apurvis@okstate.edu checked daily
 and by appointment

Office Hours:
 Tues and Thurs 1:00-1:30 pm

Course Description:
 An introduction to the study of human groups and institutions around the world, including agricultural processes, demographic trends, political behavior, religious beliefs, language patterns, and popular culture, ethnicity and other tendencies, urbanization, and environmental education.

This course investigates several themes in cultural geography. In particular, separation, cultural integration, and the relationship between people and their environment. We will ask "why" we live where we do, and "why" we live the way we do. We will look at global patterns of population distribution and investigate cultural forces about the dominant global culture—our free United States.

Course Objectives:
 Upon completion of this class, students should be able to:
 Explain the five fundamental themes of geography using global examples to support delineate cultural distributions—including flows of population, religion, economic activity, and political behavior. Explain how these distributions are related to the environment. Explain the role of each of the above spatial patterns across society and the environment. Explain the relationship between the environment and compare different perspectives on globalization and other economic trends.

Required Books:
 The Human Habitat, 7th edition, Terry G. Jordan-Bychkov et al., 2008.

Course Resources:

(1) EXAMS: There will be three exams and each worth 100 points. They will be composed of multiple choice questions. The exams will cover the material discussed in class and all readings that have been assigned. The exams will be cumulative in nature. All material covered will be studied throughout the semester. If a make-up exam is necessary, it will be all essay. In addition, there will be one 15-minute day to make up the test missed. It is your choice make up or not.

Introduction To Population Geography

Male cohorts are typically shown on the left side of the pyramid, and females are on the right side. This map shows the tremendous differences in life expectancy from one country to another Figure 2.

Introduction to population

What kinds of places are growing fastest? Have students return to their regular places in the classroom. If no button appears, you cannot download or save the media.

Introduction to population

Will a country need more schools or assisted living centers. Together with differences in the natural growth of population migrations determine the course of territorial re-distribution of population. Global population growth is most significant in the regions that are still in Stage 2.

PPT

As family size decreases and women in society have fewer children, the shape of the pyramid changes.

1.5 Population

Children need care and schooling, but generally produce little of economic value. The process just described is called the demographic transition.
