The DHS Program

GII ranges from 0 women and men fare equally to 1 one gender fares as poorly as possible in all measured dimensions. The logistical reality of the program is that it is a delivery system.

CFR

The onset of alcohol usage before the age of 15 has been found to be associated with lower achievement, academic problems, drug use and later in life. In 2019, nearly two out of five stunted children lived in South Asia while another two out of five lived in sub-Saharan Africa.

Breakfast Habits, Nutritional Status, Body Weight, and Academic Performance in Children and Adolescents

See Methodology for more information on the indicators. In particular, relations between dietary diversity and nutrient

intake, adequacy, and density, must be clarified.

WHO's Africa Nutrition Report highlights an increase in malnutrition in Africa.

Food deserts shift the consumer focus of eating healthier food to just merely securing enough food to feed individuals.

Breakfast Habits, Nutritional Status, Body Weight, and Academic Performance in Children and Adolescents

Source: FAO Statistics Division, 2019. They are followed by results of the bivariate analyses of the association between children's dietary diversity terciles and mean HAZ.

Nutritional consequences of the transformation from subsistence to commercial agriculture in Tabasco, Mexico

Explanation as to why trends are shown for stunting and overweight but only most current estimate for wasting and severe wasting: Prevalence estimates for stunting and overweight are relatively stable over the course of a calendar year.

Précis of nutrition of children and women in Haiti: analyses of data from 1995 to 2012

Précis of nutrition of children and women in Haiti: analyses of data from 1995 to 2012

With the diminishing of their land, Indians had to deal with diminishing health as well. The Report describes the current status in relation to six global nutrition targets that member states have committed to achieve by 2025, and underscores findings from the recently released Global Nutrition Report. Wasting is the result of recent rapid weight loss or the failure to gain weight.
