A brief history of Pool and Snooker

Players alternate taking shots until one of them pots the next sequential ball.

How to Choose Pool Table Felt and Style

Simonis 300 For non-teflon styles you can order Fabricoate from our billiard supplies page for fabric protection. Snooker is actually a combination of Black Pool and Pyramids. For 10' and 12' pool tables we recommend Simonis 760 for the faster speed and precision.

Snooker vs English billiards

This is only worth two points. Snooker is typically played on a much larger table than billiards or pool, so you can typically tell the difference just by examining the play surface. Players must alternate potting red and then a colored ball until there are no more red balls remaining.

Difference Between Billiards and Snooker

Speaking of the slate, it is diamond-honed, precision-machined one-inch cured slate which has been double-checked for flatness four times during machining and curing to ensure reliable and accurate play. English Billiards was virtually unknown in the United States until 1913, when Melbourn Inman visited the US and played the game against. We note here that there is a difference between cloth, wear, and cloth durability.

Century break

Today they still make exquisite and extremely expensive models, as well as lower-level entry models and everything in between. The usual form that was played in championships from about 1840 to 1940 is with three balls -- two cue balls and a red ball.
