

# Publications of the European Union 2000-01 - an extract of the general catalogue of publications

**Office for the Official Publications of the European Commission - Water and marine environment — European Environment Agency**

3.3 Assessment and validation of source data	X	Review assessment of the annual business survey is not carried out.
3.4 Assessment and validation of environmental data and statistical outputs	X	The review and analysis of various periods to validate the statistical process is not undertaken on a routine basis.
3.5 Review studies		
<b>A. Sustainability</b>		
4.1 Reference	X	There is not a permanent initiative to evaluate whether the progress meet the needs of users.
4.2 Transparency and predictability	X	Final data are disseminated only with a two year lag.
4.3 Consistency	X	Consistency between national statistics and other data is ensured.
4.4 Revision policy and practice	X	Policy is not relevant to revision policies. Studies on analysis of revisions are not made public.
<b>B. Accessibility</b>		
5.1 Data accessibility	X	Scalability of current period is included. Dissemination can be done in the form of user guide or the data service. Statistics are not subject to pre-arranged schedule.
5.2 Metadata accessibility	X	Metadata are scarce and outdated.
5.3 Assistance to users	X	Catalogue of publication, documents, and other services are not widely available.

## Water and marine environment — European Environment Agency

Food additives are substances added intentionally to foodstuffs to perform certain technological functions, for example to colour, to sweeten or to help preserve foods. Data from whole-exome, low-coverage whole-genome, RNA sequencing and microarray-based DNA methylation profiling are utilized to identify patient-specific therapeutic targets.

## Reference Standards of European Pharmacopoeia

Food supplements are concentrated sources of nutrients i. For ingredients other than vitamins and minerals, the European Commission has established harmonised rules to protect consumers against potential health risks and maintains a list of substances which are known or suspected to have adverse effects on health and the use of which is therefore controlled.

## Safety data sheets

It is committed to collect data on psychiatric hospital admissions and re-admissions, with the aim of finding determinants of re-admissions and to harmonize the psychiatric care pathways across the EU. Overall, the ANS Panel re-assessed 41 food colours.

## Publications Office

We talked to Professor Geert Van Calster about this principle, its benefits and shortcomings.

## Scientific topic: Food additives

Concerns evolve around the commercialization of data, data security and the use of data against the interests of the people providing the data. A systematic review published in 2016 from the European Commission identified at that time 10 priority projects on Big Data implemented in Europe

that fall in the four macro sectors described above and are aimed to support the sustainability of health systems by addressing the improvement of the quality and effectiveness of treatment, fighting chronic disease and supporting healthy lifestyles. For example, at the German Cancer Research Center, tools are developed to grant ways to access and analyse own data together with data from partners.

### **Reference Standards of European Pharmacopoeia**

This briefing analyses the implications for Europe of the impact of global climate change on agricultural trade. Those rules need to be updated to simplify the current authorisation procedures and to take account of recent developments in Union law and technological progress. The DEXHELPP project mainly regarding sectors 1 and 4 used routinely collected health data sources to analyse the performance of the health system, to forecast future changes and to simulate the application of policy and interventions.

### **Water and marine environment — European Environment Agency**

Big Data have the potential to yield new insights into risk factors that lead to disease.

### **JRC Data Catalogue**

WISE viewers and interactive maps allow a wide range of information to be accessed and presented in its geographic context.
