Washington : Scientific and Technical Office, National Aeronautics and Space Administration : For sale by the Supt. Following a brief overview and timeline of civilian Earth observations from space, satellite-derived shorelines SDS and satellite-derived bathymetry SDB are used to introduce and demonstrate some of the present real-world capabilities of satellite optical imagery most relevant to coastal professionals and researchers. Significantly, at the vast majority of locations worldwide, satellite remote sensing is currently the only source of information to complement much more limited in-situ instrumentation for land and sea mapping, monitoring and measurement.
