

# Recent geochemistry of the inter-tidal sediments of the Medway Estuary, Kent, UK.

[University of Greenwich] - Heavy metal distribution and accumulation in two *Spartina* sp.

Description: -

-recent geochemistry of the inter-tidal sediments of the Medway Estuary, Kent, UK.

-recent geochemistry of the inter-tidal sediments of the Medway Estuary, Kent, UK.

Notes: Thesis submitted for the Ph.D. degree.

## Sedimentation on intertidal mudflats in the lower part of macrotidal estuaries: Sedimentation rhythms and their preservation

Isotopically Light Cd in Sediments Underlying Oxygen Deficient Zones. The fluid mud is sensitive to wind-waves in this open funnel-shaped estuary, which undergoes wind-induced erosion 0. Chemosphere 2007, 67 10 , 1967-1974.

## Sediment transfer and accumulation in two contrasting salt marsh/mudflat systems: the Seine estuary (France) and the Medway estuary (UK)

A preliminary study of heavy metal contamination in Yangtze River intertidal zone due to urbanization. Chemical speciation of 12 metals in surface sediments from the northern South China Sea under natural grain size. Introduction Sources of environmental contaminants to the coastal system are numerous and may enter the estuarine environment via a number of pathways.

## Spatial variability of metals in the inter

North Sea Task force, 1993. Ecological substantiation of invariably high concentrations of heavy metals in municipal wastewater sludges. Bulletin of Environmental Contamination and Toxicology 2017, 98 4 , 534-538.

## Sediment transfer and accumulation in two contrasting salt marsh/mudflat systems: the Seine estuary (France) and the Medway estuary (UK)

Geochemistry of Major and Trace Elements in Sediments of the Ria de Vigo NW Spain : an Assessment of Metal Pollution. With accelerating sea level rise in a starved ebb-dominated system there is no known mechanism which could shift the Medway back in the direction of accretion. Koretsky, Angel Cuellar, Melanie Haveman, Lauren Beuving, Terri Shattuck, Mark Wagner.

## Spatial and temporal distributions of nitrogen, phosphorus and heavy metals in the intertidal sediment of the Chang Jiang River Estuary in China

More generally, an accurate chronology of metal input to salt marsh sediments can be difficult to assess because of the potential early-diagenetic mobility of both the radionuclides used for dating and the contaminants of interest. Developing national sediment quality criteria.
