In the 1970s, however, biologists Niles Eldredge and Stephen Jay Gould proposed that evolution by natural selection may not have been such a smooth and consistent process. In what ways is this person, event or idea similar to contemporary concerns? For many evolutionists, this means explaining the possession by species of characteristic adaptations.

## Historical Significance

Members of our own species are able to survive and reproduce in part because of habits, know-how and technology that are not only maintained by learning from others, they are initially generated as part of a cumulative project that builds on discoveries made by others.

## Biological Evolution and Genetic Variation

There is no question at all that most mammals of today are more intelligent than most reptiles of today. The ethics of evolution must be human ethics.

## view

Applicability In what way can the person, event or idea relate to modern events? These characteristics placed the species into the human genus, Homo a Latin word meaning human or man. The good news is that Jesus came and died to forgive your sins Romans 5:6-10; 6:23; John 3:16.

## Science, Religion, Evolution and Creationism: Primer

. He concluded that the best-suited organisms for a region were naturally more likely to survive and pass along their characteristics.

## **Stages of Human Evolution, Stages Of Evolution Of Man, Human Evolution Stages, Human Evolution Timeline, History of Human Evolution**

The first known tracks on land. Cultural units do not form lineages: A closely-related criticism of memetics draws on the fact that while in genetic replication we can trace a new copy of a gene back to a single parent, ideas are rarely copied from a single source in a way that allows us to trace clear lineages Boyd and Richerson 2000.

### **Introduction to Human Evolution**

Variations are produced by unknown causes, and the environment selects among them.

### **Scopes Trial**

And of course, each animal lineage also has behavioral traits that are unique to that lineage. . Endler 1986: 5 Yet even this definition is not expansive enough; molecular evolution focuses on the molecular changes within macromolecules such as DNA and RNA.
