

Survey of functional neuroanatomy

Mill Valley Medical Publishers - Towards a functional neuroanatomy of pleasure and happiness

Lecture objectives:

- Overview of brain structures to "demystify" anatomical content in Neural Science lectures
- Survey brain structure-function relations to provide background for first labs

First half of lecture:

- Quick review of basic CNS organization
- Use development to understand principles of structural organization of CNS

Second half: Functional localization

Description: -

- Beauty, Personal.
 - Spain -- Literary collections.
 - Spanish literature -- Translations into English.

Towards a functional neuroanatomy of pleasure and happiness

Although much of the model has remained, the model has been modified and amplified with the emergence of new data. Templates are modified from the atlas by Paxinos and Watson 1997. Some insight on the canonical basal ganglia model is provided, together with a selection of paradoxes and some views over the horizon in the field.

Functional neuroanatomy of amygdalohippocampal interconnections and their role in learning and memory

Objectives: Functional neuroimaging methods have proliferated in recent years, such that functional magnetic resonance imaging, in particular, is now widely used to study bipolar disorder.

Functional Neuroanatomy

Dual immunofluorescent detection of tyrosine hydroxylase red channel and α -synuclein green channel , identifying two dopaminergic neurons from a PD patient, one of them showing a typical intracytoplasmic Lewy body. You may retake each exam until they achieve a passing score.

The schematic figure shows the brain regions for causing and coding fundamental pleasure in rodents and humans. Templates are modified from the atlas by Paxinos and Watson 1997. Photomicrograph taken from a striatonigral-projecting MSN, retrogradely labeled following the delivery of rabies virus into the substantia nigra pars reticulata.

Functional Neuroanatomy

Additional abbreviations: ACo, anterior cortical nucleus; AHA, amygdalohippocampal area; BAOT, bed nucleus of the accessory olfactory tract; BMa, anterior basomedial nucleus; CLC, lateral capsular subdivision of the central nucleus; CM, medial central nucleus; ec, external capsule; IN, intercalated nucleus; L, lateral nucleus; Mad, anterodorsal medial nucleus; Mav, anteroventral medial nucleus; ot, optic tract; PMCo, posteromedial cortical nucleus; S, commissural portion of the stria terminalis. These aggregates often adopt a circular shape and form the so-called Lewy bodies, which represent the pathological hallmark of this disease. Section D was drawn at half the magnification of sections A-C.
