## Soil Surveys and Maps of Montana

Department of Agriculture, and issuing body Agricultural and Mechanical College of Texas. During identification of CRC adult species collected from sweep net samples, we found that the majority 61% were S. Ellis, Biological Services Program U.

## Elvin A. Duerst Papers, 1929

Consulting Panel HPS Folder Empty Alt. Interestingly, alfalfa planted with nurse crops at high seeding rates tended to have higher alfalfa yields in 2005 than lower seeding rates, however this difference was not significant. Crown rot symptoms of alfalfa increased from 9% in Fall 2005 to 73% affected plants in Fall 2007, which is similar to previous evaluations in Montana.

## Elvin A. Duerst Papers, 1929

Larvae burrow into the soil, feeding on alfalfa nodules and lateral roots as the instars progress Tan and Hower 1991. For many soil-borne diseases, the only economic and effective control measures are crop rotation and varieties known to have multiple pest resistance.
