Scandinavia and the Netherlands joined the industrial parade seriously only after 1850. These include the importance of state competition and mercantilism-imperialism, the crucial role of silver from the Americas in facilitating trade with East Asia, the crucial role of European naval technology, the importance of education, and even the importance of the 17th century Scientific Revolution. The book is organized into parts such as Demand, Factors of Production, Productivity and Production, Population Trends and Plagues, Technology, Credit and Money, Production, Incomes, and Consumption, the Modern Age, the Changing Balance of Economic Power in Europe.

German production, a mere 40,000 tons in 1825, soared to 150,000 tons a decade later and reached 250,000 tons by the early 1850s. A full-scale technological revolution occurred only after the 1850s. These include the, by modern standards slow, but real improvements in technology, expansion of international trade, increasing urbanization and commercialization of European society, and its engagement in a major way with the great economic Eurasian centers of China, India, and the Middle East.
