## Duck River or Aschkibokahn site of west

The term Archaic has been used as a designation for this time period but has fallen out of favour for two reasons. Fundamental to this interpretation was the location of the Aspen Parkland transitional zone between the Plains and the Boreal Forest. Environmental Setting The entire Makotchi-Ded Dontipi locale is situated in about the middle of the 3424 km<sup>2</sup> Oak Lake Ecodistrict.

## The Aschkibokahn Site (FbMb

Block B of Area B was selected for analysis. Sites from both clusters have similar vessel shapes, paste quality, temper, surface treatments and location of decoration along the inner and outer lip.

## A preliminary study of the moose (*Alces* and *alces andersoni* Peterson) in northern Manitoba, with special reference to its management

Lowie 1954:01-02 explained that classifying the Plains using geographical criteria is problematic, as vegetation gradually changes across the Plains, precipitation varies year to year, and elevation can vary dramatically within localized areas. The majority of the Hokanson site radiocarbon dates cluster into two and possibly three discrete occupation events Appendix 1.

## An Examination of Species Diversity and Bison Processing Intensity

The Canadian Shield became covered in Boreal Forest while the grasslands expanded up to the western shores of Lake Winnipeg Pettipas 1996. Other faunal assemblages in this location suggest that small-scale hunting of various mammals was practiced.

Fish and riverine mammal remains dominate the faunal assemblages of Minnesota Blackduck complex sites Arzigian 2008:114. The only distinction was that of Plains Blackduck, which was first proposed by Walde et al.
