### Web Design and HTML Help

Anything you write within the body tags will show up in your browser after you save the HTML document and refresh the browser page.

### Exam 98

Code enclosed between these two tags form the web page proper. **Inline** Designate a set of rows that summarize the columns on a table. Then type in the words I gave in the block above.

### HTML Links Hyperlinks

But with HTML5, you have the addition of the picture and figure elements. Relative URLs Both examples above are using an absolute URL a full web address in the href attribute. Step 6 — Add Some Formatting To The Text There are a number of different elements that let us add formatting to our text: — Bold text — Important text — Italic text — Emphasized text — Marked text — Small text — Deleted text — Inserted text — Subscript text — Superscript text Some of these elements have identical displays in the browser, but are actually used in different situations.

### HTML Tutorial

You should be able to identify images, tables, lists, comments and many other HTML elements. In this example, we have a b element inside an i element inside a p element.
