## The Importance of Iodine

It is often used for its preventative effects of footrot and pink eye in cattle. It is limited to less than 10 mg of iodine per head per day from EDDI. Better yet a black calf won't stain!!! A must be purchased separately to make the secondary ground connection.

## The When's and Why's of Supplementing Iodine to Cattle

For use as an I-supplement for animals. Add fresh tablets at the predetermined dose interval to the simple dispenser supplied by the company. Non-clinical I-deficiency is common: Most low I-status animals are clinically healthy; they show no signs of I-deficiency, or apparent depression of health or productivity.

## Effects of Iodine on Livestock

Iodine, through the thyroid hormones, thus plays an important role in thermoregulation to keep body temperature steady and even, especially when the weather is below or above the zone of thermal neutrality for the animal. However, unlike calves Figure1 , lambs and kids, in pigs and poultry goitres swelling of the neck is not apparent. McGraw-Hill Book Company, New York.

## The When's and Why's of Supplementing Iodine to Cattle

When soil is hard or rocky, double spikes are more difficult to install and remove.

## Iodine deficiency in sheep and goats

In particular, avoid the use of excessive I-supplement in mares in late pregnancy, or young foals. Clinical signs of iodine toxicity Iodism in cattle is manifested by a persistent cough, hyperthermia, naso-ocular discharge, in appetency, depression, dermatitis, and alopecia.

## Iodine or Coppertox

I don't use anything and have very little trouble with navel infection. Failure to shake the container frequently during use may cause sedimentation. Why do we offer them? Likewise, lumpy jaw and soft-tissue swellings about the neck and jaw tend to appear when potentially lacerating forages, such as barley beards or thistles, are part of the diet.

### **Iodine Wound Spray**

A deficiency of the mineral will lead to reproductive failures. × About Conductivity Conductivity measures the amount of electrical current a material can carry.

### **Iodine Supplements for Livestock**

The body recycles I poorly. It is an important component of thyroid hormones that are necessary for energy metabolism in animals.
