[2021 Chignik earthquake](#)

This steeply-dipping, trench perpendicular fault ruptured up the Pacific slab towards the trench for a length of 70 km and caused slip of up to 5 meters.

List of earthquakes in the United States

This quake also triggered hot springs activity.

2003 San Simeon earthquake

Probably centered in the Oceanic fault zone within the , it was caused by and the rupture propagated southeast from the for 12 miles 19 km. The largest aftershocks were of magnitude 5. The rupture of this earthquake did not propagate towards the shallow, near trench section of the subduction zone.

In Templeton, Bethel Lutheran Church ELCA , sustained major damage to its 110+ year old building and the apse had to be rebuilt. The location, mechanism and depth — and the large size of the event — are all consistent with slip occurring on the subduction zone interface between the two plates. Due to the general self-sufficiency of those living near the fault rupture, very few lifeline systems were compromised.

A tsunami warning was broadcast from , Alaska to northern , while a tsunami advisory was issued to the coast of Washington. Most of them were along other fault structures away from the main fault. This is unusual since earthquakes of magnitude 8 or higher occur only about once every year on average.

2013 Craig, Alaska earthquake

It was followed by another aftershock of M w 7. Contents: TCLEE lifeline earthquake investigation reports -- The San Simeon earthquake of December 22, 2003 -- 1.
