In 1905, published a devastating criticism of the foundation of Newton's theory of motion.

Consider another example from the history of physics. This includes such subjects as quantum mechanics both nonrelativistic and relativistic , atomic and molecular physics, disorder effects in condensed matter, the existence and properties of the phases of model ferromagnets, the stability of matter, the theory of symmetry and symmetry breaking in quantum field theory both in general and in concrete models , and mathematical developments in functional analysis, algebra and modern probability theory, to which such subjects lead.

Although related to , mathematical physics in this sense emphasizes the mathematical rigour of the similar type as found in mathematics. General relativity replaces Cartesian coordinates with , and replaces Newton's claimed empty yet Euclidean space traversed instantly by Newton's of hypothetical gravitational force—an instant —with a gravitational field.

**Mathematical Physics**

Frenkel, as related in A. Having ostensibly reduced the Keplerian celestial laws of motion as well as Galilean terrestrial laws of motion to a unifying force, Newton achieved great mathematical rigor, but with theoretical laxity.

**Mathematical Physics**

It was hypothesized that motion into the aether prompted aether's shortening, too, as modeled in the.

**The mathematics of physics and chemistry : Margenau, Henry, 1901**

Physics, which is a science, is about getting agreement between predictions and experimental observations.
