

# Aluminum Extraction Characteristics of Three Calcium Aluminates in Water, Sodium Hydroxide, and Sodium Carbonate Solutions.

s.n - Leaching characteristics and mechanism of the synthetic calcium

Description: -

- Aluminum Extraction Characteristics of Three Calcium Aluminates in Water, Sodium Hydroxide, and Sodium Carbonate Solutions.

- Report of investigations (United States. Bureau of Mines) -- 6528 Aluminum Extraction Characteristics of Three Calcium Aluminates in Water, Sodium Hydroxide, and Sodium Carbonate Solutions.

Notes: 1

This edition was published in 1965

Filesize: 11.29 MB

In plane-polarized light many residual grains of unhydrated and partially hydrated clinker are usually seen, which are often opaque or red 233. Our library is the biggest of these that have literally hundreds of thousands of different products represented. These confidence-building exercises will influence the application potential for geopolymers in waste immobilisation.
