Biological pest control

FHAAST-BC Program— 2000 through 2004 The next five years 2000 through 2004 of the FHTET-BC Program focused on publishing documents, sponsoring meetings, continuing ongoing biological control projects, and initiating new projects to manage invasive species in forest ecosystems.

Biological pest control

In: Leakey RRB, Newton AC eds Tropical trees: the potential for domestication and the rebuilding of forest resources.

Forest tree associated bacteria for potential biological control of Fusarium solani and of Fusarium kuroshium, causal agent of Fusarium dieback

The providing of artificial shelters in the form of wooden caskets, or is also sometimes undertaken, particularly in gardens, to make a cropped area more attractive to natural enemies. El Haya, 91070 Xalapa, Veracruz, México. Those females that copulate with the sterile males will lay infertile eggs, resulting in a decrease in the size of the population.

Biological control of emerging forest diseases: How can we move from dreams to reality?

As identified in the Forest Service 2013 National Strategic Framework for Invasive Species Management, non-native invasive insects, pathogens,

and plants are among the most significant environmental and economic threats to fulfilling this mission.

Biological control of tree and woody plant diseases: an impossible task?

Plant-Provided Food for Carnivorous Insects — a protective mutualism and its applications. Life cycles of greenhouse whitefly and its parasitoid wasp Parasitoids are among the most widely used biological control agents.
