Ozone is an oxidizing molecule, a sort of super active oxygen, which, by reacting with blood components generates a number of chemical messengers responsible for activating crucial biological functions such as oxygen delivery, immune activation, release of hormones and induction of antioxidant enzymes, which is an exceptional property for correcting the chronic oxidative stress present in atherosclerosis, diabetes and cancer.

Initial investigations to develop a gas chromatographic assay for resorcinol monoacetate indicated that commercial material was not a single substance but a three-component mixture.

Preparative

This book's main objective is to provide that theory by bringing together scholars from different disciplines who are working on the issue. Characterization of the composition of commercial resorcinol monoacetate has been demonstrated by gas chromatography. We requested a number of long-time friends, colleagues and former students of Professor Srinivasan to contribute a paper preferabl~ in the area of stochastic processes and their applications.
