Wagner versus Keynes: Public spending and national income in Italy

Formally, when there are N types of government expenditures, each with its own productivity, B_i , in the production function, and share i in the budget, then the effect on growth of increasing the share of government expenditure going to the i th component depends on which component's share is being reduced. One way to sort out this three-way relationship is to look at a multiple regression using QoG as the dependent variable and both GDP and the share of government revenue in GDP as independent variables.

Another dataset covering 33 expenditure rules from 1985 to 2013 shows that compliance with expenditure rules is greater than compliance with balanced budget rules—particularly if the compliance rules are enshrined in law—and that the presence of expenditure rules is associated with stronger fiscal performance. Countries above the trendline have higher QoG than would be expected based on their level of democracy alone, while the opposite is true for those below the trendline.
