## Surface weather analysis

Weather maps in English-speaking countries will depict their highs as Hs and lows as Ls, while Spanish-speaking countries will depict their highs as As and lows as Bs.

## Weather front

This is typically the case along the coast, for example. Frontal zones can be slowed by geographic features like mountains and large bodies of warm water. Low pressure also creates surface winds deriving from high pressure zones.

**metrics.learnindialearn.in: A collection of weather pages with truly unique content since 1994.**

For example, an H may represent high pressure, implying fair weather. The southern plains west of the in the are a particularly favored location.

## Surface weather analysis

When the convection is strong and linear or curved, the MCS is called a squall line, with the feature placed at the leading edge of the significant wind shift and pressure rise.

**metrics.learnindialearn.in: A collection of weather pages with truly unique content since 1994.**

Main article: The classification is the most widely accepted form of air mass classification.

## Weather front

For instance, can bring bands of or be preceded by , while are usually preceded by and. Fronts in meteorology are boundaries between that have different density, air temperature, and. A dry line is depicted on United States surface analyses as a brown line with scallops, or bumps, facing into the moist sector.
