MBL's 2020 Highlights

Then the early twentieth-century brought experimental , and by the 1950s and 1960s embraced genetics and became known as developmental biology.

Gerald Weissmann

Joe Connell begins his long-term studies of predator-prey interactions among marine invertebrates on the supporting wall under the cantilever pier on Cantilever Point and at Millport Scotland this is pioneer work in the new field of experimental marine ecology. But his replies were for all that cogent and in advance of their time; the former Bowdoin scholar, like the rapier-witted Thomas Reed in the Congress, gave as good as, or better than, he got.

The last ten named could all be described as comparative physiologists, and broadly the majority of their staffs could also be so described, although in fact they ranged in their own research activities from comparative biochemistry and biophysics through functional morphology to the physiological ecology of invertebrates, with only a few being additionally systematists. .

When the team compared those bins to other groups of TM7 species, like those found in the environment outside of the body or in human or animal guts, they were amazed to find that, genetically, instead of the plaque and tongue TM7 species grouping together, the TM7 species from dental plaque grouped more closely with the TM7 species found in soil, while the TM7 species on the tongue more closely resembled those found in the gastrointestinal tract. From the Johns Hopkins University Yearbook.

Marine Biological Laboratory — Biological Discovery in Woods Hole

Roger Longley, a year-round neurobiology researcher, provides some support for this computer. LeGros Clark 1958 , to the modernization of much vertebrate histology and to some continuing techniques of tissue culture.

MBL's 2020 Highlights

Through lectures, conferences, and written articles Dohrn continuously tried to make the Zoological Station known to a wider public. In 1975, the MBL's Ecosystems Center was established, with George Woodwell as director.

Campus Timeline

Oceanography Professor Utterback suffers a cracked vertebra while working on the Catalyst, when he is hit across the back with the boom. Dohrn and Mackay rented two rooms at the Palazzo Vitale, Strada Garibaldi, right on the port, with a breathtaking view of the Straits of Messina and the coast of Calabria. Elsewhere in this volume is reproduced a letter from Wilson to Dohrn 7 June 1899 , signed with a cello device and quoting the cello line, starting at the 12th measure, of Beethoven's C-sharp minor string quartet.

UW Friday Harbor Laboratories Historical Timeline

Cleve Vandersluys, owner of the Hydah and FHL associate since 1947, learns SCUBA diving from Paul Sund and becomes the first commercial SCUBA diver in the area. Hodgkin and Huxley received the Nobel Prize in 1963 for their description of the ionic basis of nerve conduction Barlow et al.
