Additional training material, in the form of PowerPoint presentations, has been developed for each chapter of the handbook. The material is presented in an organized and clear manner.

Handbook of Health Physics and Radiological Health. 3rd ed, Radiology

Handbook of Health Physics and Radiological Health is meant mainly to be a reference for health physicists; not every radiologist needs a copy. Much of the information presented is taken from sources such as the National Council on Radiation Protection and Measurements, International Commission on Radiological Protection, Nuclear Regulatory Commission, Food and Drug Administration, and Environmental Protection Agency, thus serving as a digest of much of the radiologic information provided by these organizations.

Radiological Health Handbook.

The chapters on estimated radiation doses from various sources, patient doses, bioeffects and risk, and nonionizing radiation will be of interest to radiologists. This new edition compiles all essential data in this vast field into one user-friendly, authoritative source.
