Common Tomato Problems Physiological Disorders Leaf Curl—Curling or rolling of the leaves occurs in hot weather or after cultivation or severe pruning.

Growing Tomatoes

Use of resistant tomato cultivars, however, is most effective and practical. If lights are used, keep the plants within six inches of the bulbs. And a third type, , consists of generations-old seeds grown for their specific unique characteristics, like taste, texture, color, and shape.

All About Tomatoes

Damage to fruit appears as a cloudy discoloration and results in uneven ripening of the maturing fruit. The pathogen may reside in soil indefinitely or colonize fibrous root systems of several non-host crops and weeds. Each fruitworm will feed on several tomatoes and, in general, will feed on smaller fruit first.

How to Successfully Plant and Grow Tomatoes

When these conditions occur, flowers will drop or fruit will be misshapen.

Growing tomatoes in home gardens

In general, cutworm problems are sporadic but can be severe on occasion.

They are mainly foliage feeders; however, occasionally they feed on the fruit.

Collars should be removed after about two to four weeks from transplanting so that they do not interfere with normal plant growth. When staking tomatoes, put the stake in shortly after transplanting to lessen root damage.
