Family Culture and Chronic Conditions 7.

### **Primary Care of the Child With a Chronic Condition**

Previous research on family support needs has been conducted primarily in specialty care or community settings e.

### **Primary Care of the Child With a Chronic Condition E**

Therefore, the purpose of this study was to 1 identify the types and frequency of unmet needs among families of children with chronic health conditions treated in primary care practices, and 2 determine the child and family risk factors for unmet needs. Attention Deficit Hyperactivity Disorder 13. Additional research, including longitudinal studies, is needed to better understand the contribution of cognitive appraisals to parental distress and to the mother's ability to obtain needed resources for her child and other family members.

### **Primary Care Supports for Children with Chronic Health Conditions: Identifying and Predicting Unmet Family Needs**

Systems of Care for Children with Chronic Conditions Part Two: Chronic Conditions 10. For example, both studies show that most parents of children treated in primary care settings have a high need for information about the child's condition and services available.

#### **Primary Care of the Child with a Chronic Condition**

Comprehensive summary boxes at the end of all chronic conditions chapters provide at-a-glance access to key information. Regardless of the nature of the relationship between perceived family burden and unmet needs, maternal reports of high family burden may indicate an increased need for help with accessing services and supports. Abstract Objective To examine unmet needs among families of children with chronic health conditions treated in primary care settings and to identify predictors of these needs.
