The Diversity of Life by Edward O. Wilson

We may know something of less than 2 million species, but we can only guess if there are 10 million or 100 million more out there not counting even vaster numbers of unknown microorganisms.

Nxtbook Media

While I almost most certainly won't read it again, as everything that I thought was cool in studies did not pertain to the course, it definitely was not the worst textbook I have had to read. Biologists collectively call all the individuals of a species living within a specific area a population. Keep in mind that 99 per cent of all species that have ever existed are now extinct! These mutations allow the possibility for organisms to adapt to a changing environment.

1.2C: The Diversity of Life

Video Review Watch this discussion about biodiversity: You can Biodiversity provides us with all of our food. Make Connections Figures include Figure 37. This course is an introductory general biology course for non-science and new science majors.

Domain (biology)

Some cells contain aggregates of macromolecules surrounded by membranes.
