The fossil record tells us that life on Earth has lasted at least 3. Afterwards, huge whales took its place as the largest animals in the ocean.

## Do Dinosaurs Still Exist?

One kind of fossil is formed when the buried remains of an animal are replaced by minerals, creating a stone fossil. But these early birds didn't look the same as modern ones.

## World's first dinosaur fossil found sitting on nest of eggs

Thanks again for your question. The realistic setups of the dinosaurs were amazing! This could happen surprisingly soon, says Ward, perhaps in just 500 million years. They may even have given rise to myths and legends about dragons and other monsters.

## Where to find dinosaurs today : Cohen, Daniel, 1936

Even so, when Plot came across a fossil that looked uncannily like a fragment from an unusually large thigh bone, he had to admit that it probably once belonged to an animal. Yet Britain still holds a very special place in the history of dinosaur science. The microbes living on Earth could not cope, and a massive extinction followed. He calls the idea the.

## BBC

The universe began as an infinitely tiny speck, which exploded. In Boltzmann's time, most physicists believed that the universe was eternal — it had always existed. Ornithischians were herbivorous plant-eating dinosaurs. Why does the future look different from the past at all? Around 66 million years ago, life on Earth was devastated by a sudden, dramatic occurrence that caused 75% of all plant and animal species to become extinct.

## **Google now lets you see dinosaurs in the real world through augmented reality**

Their height and long necks would have given them a long reach and helped them spot prey from a distance, while their long, powerful legs provided speed and acceleration. Before long he was ostracised by the physics community for his ideas. Neither did Triceratops, Brachiosaurus, Velociraptor or Stegosaurus.

## **Fossil find adds to evidence of dinosaurs living in Arctic year**

Something for kids of all ages even us big kids! Alien forensic scientists might well conclude that life on Earth had a hand in its own demise Eventually, so much carbon dioxide will have been removed from the air that plants can no longer perform photosynthesis.
