Towards personality

Product quality, and weight are predicted from the model to provide a framework that will allow commercial beef producers to determine marketing strategies likely to result in optimal return. Boîte: 123A, 125D, 126T, 158M. This research is inspired by simple appealing visualization of itemsets frequencies in the simple well known two dimension matrix representations.

RECHERCHE

These results indicate that corn silage, because of greater energy concentration, was a more desirable forage in feedlot diets composed of less than or equal to 40% forage and that protein type soybean meal and fish meal in growing diets is not an important factor in feedlot performance or carcass traits of Holstein or crossbred steers that are fed these diets. Very Large Data Bases, vol.
