Two Experiments Involving Atomic Rubidium: 4D Excited State Absolute Photoionization Cross Section Measurements and 5S

There was significant overlap between students so that the expertise and knowledge were transferred from one student to the next and the continuity of the project was ensured. Hartree Atomic Units Appendix B.

Double Resonance Measurements of Hyperfine Structures in Potassium on JSTOR

An estimate of the quadrupole shielding Sternheimer correction factor has been obtained for some elements by a comparison of moments derived in this work and from hyperfine data in muonic and pionic atoms.

Hyperfine structure in 4d [d]

In her laboratory, rubidium atoms were cooled and trapped in a standard magneto-optical trap using diode lasers operating at 780 nm
