### CAB Direct

It causes discoloration of the paint mill marks Marks left by a planer that give the surface of a board a wavy appearance. Varnish is a cold finish. Joinery is the art of making joints.

### Sam Allen's Dictionary of Woodworking Terms

No additional protective top coat is needed when this type of stain is used. Lacquer is a hot finish. Coarser grits are designated by numbers that get larger as the grit gets coarser.

### CAB Direct

It is generally darker and more decay-resistant than the younger sapwood. The moisture breaks the bond between the paint and the wood, lifting the paint film into a blister. Underlayment has a slightly rough surface and is intended for use under carpet or other flooring materials.

### CAB Direct

It has a stop in its housing and stop holes at intervals along the bench.

### Woodworking Terms Glossary

Many woodworkers no longer make the distinction and simply call the joint a dado regardless of grain direction. It forms different-colored compounds when it reacts with certain chemicals. When the percentage of horsehair in a brush becomes too large the quality of the brush is degraded.

### Woodworking Terms Glossary

It is used alone to make striping and sign painters' brushes or blended with China bristle to make high-quality brushes. Unlike most lacquers, it can be applied directly over many finishes.

### **Sam Allen's Dictionary of Woodworking Terms**

Oak and birch plywood also frequently use rotary-cut veneers. End grain absorbs finishing material to a greater degree than other wood surfaces because open-cell cavities are exposed at the surface. Ogee A moulding with an S-shaped profile.
