An Introduction to Networks in the Global Village

Harris goes on to describe how American media giants are taking advantage of globalization to self promote while homogenizing musical diversity.

Global Village: Where Cultures Connect

Therefore, in order to expand the academic interests and scrutinize the structural role and position of each cultural group, which represents ethnic, racial, national, or regional identity, it may be useful to examine the ways in which messages about cultural issues are distributed across groups in cyberspace. Other methods of content analysis could also be usefully deployed. Men could drop into such places to talk and to escape domestic boredom.

Making a Global Community on the Net

Limitations The data for the study reported here were based on natural, voluntarily created groups in Usenet.

We Need Both Networks and Communities

For example, there are hundreds of discussion groups with ethnic, racial, national, or cultural identity in the Usenet, listserver or bulletin board systems, and commercial on-line services such as America Online. Their analyses reflected the continuing American tension between individualism and communalism originally put forward by the influential historian, Frederick Jackson Turner. Community network analyses including those represented in this book have shown the continuing abundance and vitality of interpersonal relationships even as they have been affected by capitalism, socialism, urbanization, industrialization, bureaucratization, and new transportation and communication technology.

ILLC

Although the community networks of Torontonians are far-flung, most of Torontonians face-to-face interactions are with people who live or work

near them. See also Kennedy and Galtz' recent review 1996.

Global village

At the same time, the material comfort of most North Americans means that they no longer need to rely on maintaining good relations with community members to get the necessities for material survival. That is all well and good, but many of the book's conclusions are drawn from a much smaller subsample of 33 individuals, and this is just too small a dataset. Whenever scholars have looked for non-local ties, they have found far-ranging networks.
