Finally we will discuss which of these graphs are Gromov-hyperbolic.

Epistemology of Geometry (Stanford Encyclopedia of Philosophy)

I've tried to solve the system in homogeneous coordinates but I think that maybe there is a faster way. On the maximal connected algebraic subgroups of the Cremona group. He wanted a map that would be useful for astronomical calculations — specifically, he needed a map projection that would accurately depict areas on the surface of the Earth — the commonly used Mercator Projection significantly distorts areas on the surface of the Earth.

Non

Hilbert had been introduced to a number of controversies about elementary projective geometry that concerned what results in what settings implied what other results.
