Bureau of Reclamation

System extinction was less likely for the redistribution scenarios than for the removal scenarios.

Population Models for Stream Fish Response to Habitat and Hydrologic Alteration: the CVI Watershed Tool. EPA/600/R

The real parameter estimates provided by multistate models must be converted before they can be incorporated into a matrix model. If these demographic characteristics have a genetic basis, local adaptation may play an important role in the persistence of isolated populations.

Population Models for Stream Fish Response to Habitat and Hydrologic Alteration: the CVI Watershed Tool. EPA/600/R

Watkin p 27-38 Northern and High Altitude Reclamation S. In addition, while the reinitiated consultation is underway, OSMRE has developed to ensure that all appropriate regulations, the requirements from the 1996 BiOp, and the Terms and Conditions listed in the Incidental Take Statement associated with the 1996 BiOp are followed. Stable stage distributions indicated that size class zero would contain the most fish 75% , followed by size class 4 13% and size classes 1—3 each about 4%.

Stream Protection Rule

N Am J Fish Manag 17: 1126—1133. Until the formal Section 7 process is completed, State regulatory programs may continue to rely on the 1996 BiOp and the 1996 Incidental Take Statement ITS for the exemption of take.
