The radial component of the velocity will be zero; this must be true if we are to use the annular ring approach; to assume otherwise would suggest interference between annular rings at some point downstream.

By symmetry, triangle SBc also has the same area as triangle SAB, therefore the object has swept out equal areas SAB and SBC in equal times.

Electronic Rearrangements and Angular Momentum Couplings in Quantum State

This high-level treatment, based on a series of lectures the author gave at Oak Ridge National Laboratory, offers clear discussions of the general theory and its applications. Analyses of such van der Waals Rydberg spectra using MQDT may help assess the potential and the limitations of this technique. THE ANGULAR MOMENTUM OPERATORS 5.
